CLAIMS	
a. Claim(s) Missing	
b. Improper Dependency	
c. Duplicate Numbers	
d. Incorrect Numbering	initials <u>CA</u>
e. Index Disagrees	RESPONSE
f. Punctuation	
g. Amendments	
h. Bracketing	
i. Missing Text	
j. Duplicate Text	
k. Other	
	initials

Replace the paragraph on page 12 which begins "Finally in figures 5 and 6" with the following:

Finally in figures 5 and 6, respectively, the method according to the invention has been qualitatively evaluated against a reference method which is a determination of CFR by a doppler-technique. In this case however, it should be noted that the doppler-technique has its limitations and is not entirely accurate.

Please add the following paragraphs to the end of page 11:

As previously disclosed in this application, CFR can be obtained by measuring the mean transit time, T_{mn} , for a bolus dose of cold liquid by employing the response curves from lead resistance measurements and a temperature sensor respectively.

For the calculation of T_{mn} , the time constant, τ , of an exponential function $e^{-t/\tau}$ is calculated. It has also been discovered by the inventors that τ itself is correlated to the flow in a coronary vessel, and, therefore, τ itself can be used to determine a value of CFR where τ_{rest} is the time constant of the temperature sensor response in a resting condition and τ_{hyper} is the time constant of the temperature sensor in a hyperemic condition. Accordingly, $CFR = \tau_{rest}/\tau_{hyper}$.

Please delete the page of the application which contains facsimile indicia across the top which says:
